building information modelling bim is a set of interacting policies processes and technologies

that generates a methodology to manage the essential building design and project data in digital format throughout the building's life cycle. BIM makes explicit the interdependency that exists between structure, architectural layout, and mechanical, electrical, and hydraulic services by technologically coupling project organizations together. Integrated Building Information Modelling is a handbook on BIM courses, standards, and methods used in different regions including UK, Africa, and Australia. 13 chapters outline essential information about integrated BIM practices such as the BIM in site layout plan, BIM in construction product management, building life cycle assessment, quantity surveying, and BIM in hazardous gas monitoring projects, while also presenting information about useful BIM tools and case studies. The book is a useful handbook for engineering management professionals and trainees involved in BIM practice.

This book on blended learning environments to foster self-directed learning highlights the focus on research conducted in several teaching and learning contexts where blended learning had been implemented and focused on the fostering of self-directed learning. Several authors have contributed to the book, and each chapter provides a unique perspective on blended learning and self-directed learning. Research from each chapter becomes evident that coherence on the topics mentioned is established. One of the main aspects drawn in this book and addressed by several authors is the use of the community of inquiry (CoI) framework when implementing teaching and learning strategies in blended learning environments to foster self-directed learning. This notion of focusing on the CoI framework is particularly evident in both theoretical and empirical dissemination presented in this book. What makes this book unique is the fact that researchers and peers in varied fields would benefit from the findings presented by each chapter, albeit theoretical, methodological, or empirical in nature. This in turn provides opportunities for future research endeavours to further the narrative of how blended learning environments can be used to foster self-directed learning.
